

Project name: AI-powered software Testing

Module Name: Login and Authentication Module

Webpage URI - <https://www.google.com>,
<https://the-internet.herokuapp.com/login>

Testcase ID: TC-12-01

Testcase: Verify Valid Login

code :

```
from selenium import webdriver
from selenium.webdriver.common.by import By
from selenium.webdriver.support.ui import WebDriverWait
from selenium.webdriver.support import expected_conditions as EC
from selenium.common.exceptions import TimeoutException,
NoSuchElementException
import time

try:
    driver = webdriver.Chrome()
    driver.maximize_window()

    driver.get("https://example.com")

    try:
        element = WebDriverWait(driver, 10).until(
            EC.visibility_of_element_located((By.TAG_NAME, "h1"))
        )
        print("Element found:", element.text)
    except TimeoutException:
        print("Timed out waiting for element to appear.")

    try:
        link = driver.find_element(By.TAG_NAME, "a")
        link.click()
        print("Clicked the first link.")
    except NoSuchElementException:
        print("No link found on the page.")
    time.sleep(3)

finally:
    driver.quit()
```

TUTORIAL 12

The screenshot shows the PyCharm IDE interface. The main editor displays a Python script named `st.pr12.py` using Selenium WebDriver to interact with a web browser. The script imports necessary modules, initializes a Chrome WebDriver, maximizes the window, navigates to `https://example.com`, and waits for an `<h1>` tag to be visible. The Run tool window at the bottom shows the execution path and the output of the script.

```
1 from selenium import webdriver
2 from selenium.webdriver.common.by import By
3 from selenium.webdriver.support.ui import WebDriverWait
4 from selenium.webdriver.support import expected_conditions as EC
5 from selenium.common.exceptions import TimeoutException, NoSuchElementException
6 import time
7
8 # Initialize Chrome WebDriver
9 try:
10     driver = webdriver.Chrome() # Ensure chromedriver is in PATH or specify executable_path
11     driver.maximize_window()
12
13     # Open a website
14     driver.get("https://example.com")
15
16     # Wait for an element to be visible (example: <h1> tag)
17     try:
18         element = WebDriverWait(driver, timeout=10).until(
```

Run `st.pr12`

C:\Users\Admin\PycharmProjects\ST.pr12\.venv\Scripts\python.exe C:\Users\Admin\PycharmProjects\ST.pr12\.venv\Lib\st.pr12.py

Element found: Example Domain
Clicked the first link.

Process finished with exit code 0
